

P2P ANTIDOTE GOES BEYOND THE FIREWALL . . .

. . . WITH REAL-TIME RESPONSE TO A FULL SPECTRUM OF SECURITY THREATS

There are all kinds of threats lurking at your network's edge: everything from spam to worms and viruses. There is also the challenge of blocking malicious webpages and assuring that your bandwidth is used to support legitimate business applications. How can you possibly protect your network and accomplish all of these goals?

You need P2P Antidote, a new suite of enhanced Antivirus, Antispam and Web Filtering services. More effective than a firewall. More current than the morning news. Supported 24/7 by Point to Point's staff of experienced Internet security engineers. All at a reasonable monthly fee. These 3 new services complement our existing Point to Point services, including P2P Intrusion Prevention, as part of our comprehensive managed Internet services.

P2P Antidote ANTIVIRUS

With the economic costs of Internet viruses estimated at over \$100 billion in 2004, it is critical for every business to minimize their economic risk. Unlike host-based antivirus solutions that leave gaps in protections and restrict network and application performance, P2P Antidote Antivirus is a network-based antivirus that eliminates viruses and worms in the network before they reach the hosts. With advanced content processing technology, this antivirus solution offers effective, real-time, high speed performance.

- Automated antivirus & spyware detection
- Database includes over 29,000 network threats
- Automatic updates
- Stop viruses at network's edge
- Fast implementation

P2P Antidote ANTISPAM

If the majority of e-mail you receive is spam, your experience mirrors that of most businesses. Our P2P Antidote Antispam solution will decrease the amount of time employees spend sorting spam.

- Constantly updated list of known spam origins or user groups
- In-depth e-mail screening

Web Filtering

Rapid Identification of New Threats

Reasonable Monthly Fees

P2P Antidote WEB FILTERING

The Internet has given us global access to valuable information. Yet this essential productivity tool can be used inappropriately. Inappropriate use not only consumes valuable bandwidth, but can expose an employer to legal litigation, such as claims of hostile work environment (when employees view and download offensive content) and copyright infringement (when employees use file-sharing programs to download music and movie files). P2P Antidote Web Filtering monitors and controls web access for your organization, and can help schools and government agencies comply with the Children's Internet Protection Act (CIPA) and other regulations on Internet access.

- Fully managed web content filtering
- Comprehensive URL ratings database with over 30 million domains
- Granular blocking and filtering
- 56 user-selectable content categories
- Protects against threats to bandwidth consumption from streaming media, filesharing, and spyware sites

P2P Antidote FLEXIBLE PLANS

Point to Point offers custom network protection plans, You can choose individual services or all three. Whatever you choose, you have the advantage of a secure solution with low monthly fees and easy set up.
